

DIMENSION SHEET - PICKUP TRUCK SHELLS

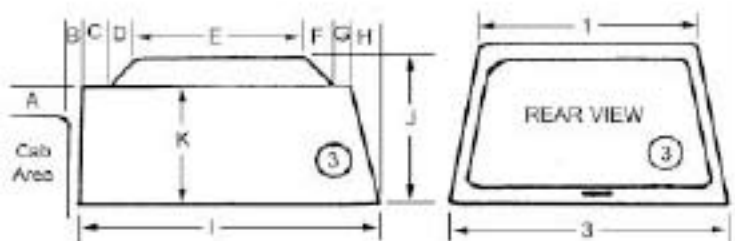

All length measurements are taken on a straight horizontal line.

Begin at the REAR edge of the truck cab area roof (as shown) and work toward the rear of the shell.

All height measurements are taken on a straight vertical line and are taken from either the top of the cab area (A), or measured from the top edge of the truck bed to the top of the shell.

Choose the style of shell installed on the pickup (1 thru 5). Next, note the measurements for each letter or number in the spaces below. Ignore letters and numbers that are not applicable to the style of shell you are measuring.

A _____ B _____

C _____ D _____
